

MOE HTET KYAW

 Moehtetkyaw0001@gmail.com  [LinkedIn](#)  [Git Hub](#)  Melbourne, VIC

Cybersecurity graduate from **Monash University** with hands-on experience in network security, authentication systems, and Linux-based infrastructure. Built and deployed multiple home-lab security projects including NAS infrastructure, automated vulnerability scanning tools, and RFID security testing environments. Experienced working in Agile teams and implementing secure authentication, encryption, and role-based access control in real-world applications. Seeking an entry-level role in cybersecurity, security engineering, or backend development.

EDUCATION

Monash University | Melbourne, VIC
Bachelor of Information Technology (Graduated in December 2025)
Cyber Security

SKILLS:

- **Security & Forensics:** Vulnerability Assessment (**Nmap, Scapy**), Network Auditing (**Wireshark**), Digital Forensics (**Autopsy**), and Hardware Security (**Proxmark3, Raspberry pi**).
- **Infrastructure & Networking:** Linux (Kali, Debian, Ubuntu, Arch, Endeavour OS), TCP/IP, SSL/TLS, OAuth 2.0, and Raspberry Pi Home Lab deployment.
- **Programming & Tools:** Python, Java, PHP (CakePHP), JavaScript, Git, Agile, and more.
- **Core Competencies:** Application Security, Identity Management (RBAC), and Financial Data Encryption (Stripe API)

INDUSTRY/JOB EXPERIENCE

Monash IT Industry Experience: [We Help Hospitality](#)

Cybersecurity Lead / Developer
Tech Stack: OAuth 2.0, Stripe API, SSL/TLS, CakePHP, Git, Trello, etc.

- **Application Security & Authentication:** Implemented OAuth 2.0 for secure user authentication and engineered a Role-Based Access Control (RBAC) system to enforce the principle of least privilege across three user tiers.
- **Data Encryption & Compliance:** Configured and managed SSL/TLS certificates to ensure end-to-end encryption (HTTPS), specifically protecting sensitive financial data during Stripe API payment processing.
- **Security-Focused Development:** Collaborated with the development team to audit backend logic, ensuring that automated mailer systems and user registration workflows were protected against common vulnerabilities.
- **Identity Management:** Developed secure verification workflows, including mandatory email validation and automated security confirmations for user transactions and account changes.
- **Secure Deployment & Infrastructure:** Managed the transition from development to a live production environment, ensuring the server configuration met security standards for a public-facing hospitality platform.
- **Collaborative Risk Management:** Utilized Git and Trello within an Agile team to track security patches, manage code merges, and ensure that security requirements were integrated into every sprint.

Freelancer: [GTD Hospitality](#) (March 2026-April 2026)

Security Consultant & Full-Stack Developer
Tech Stack: Stripe API, RBAC, PHP, Git, Trello, Cal.com

- **Client Requirements & Scoping:** Acted as the primary technical point of contact, translating business operational needs into secure technical specifications for a hospitality management platform.
- **Access Control Strategy:** Architected and deployed a custom Role-Based Access Control (RBAC) system, ensuring granular permission levels that aligned with the client's organizational hierarchy.
- **Production Lifecycle Management:** Managed the full deployment pipeline, including server hardening and security configuration, to transition the platform from a local development environment to a public-facing production state.

PROJECTS

NAS Server Infrastructure – Raspberry Pi Home Lab

Technologies: Raspberry Pi 5, OpenMediaVault, Linux (Debian), RAID, Samba/NFS.

- Designed and deployed a Network Attached Storage (NAS) system using Raspberry Pi and OpenMediaVault.
- Configured secure file sharing protocols (SMB/CIFS and NFS) for cross-platform access across Windows, macOS, and Linux.
- Implemented storage management and network-based data centralization within a home lab environment.
- Developed hands-on experience with Linux server configuration and network storage architecture.

Bjorn: Portable Autonomous Network Security Auditor

Technologies: Raspberry Pi Zero 2W, e-Paper Interface, Python, Scapy, Nmap, Raspberry Pi, Linux (Debian)

- **Software Debugging & Optimization:** Analyzed and refactored core Python scripts from an open-source framework to resolve local environment conflicts and broken dependencies.
- **Vulnerability Assessment:** Configured automated scanning sequences using Nmap and Scapy to identify open ports, service versions, and potential entry points for security auditing.

Physical Security: RFID & NFC Analysis Lab (Proxmark3)

Technologies: Proxmark3 Easy, Iceman Firmware.

- **Tag Auditing & Cloning:** Performed successful identification, data dumping, and cloning of MIFARE Classic and HID Prox credentials to demonstrate vulnerabilities in legacy access control systems.
- **Cryptographic Weakness Testing:** Utilized the Nested and Hardnested attack vectors to recover encrypted sectors and secret keys from MIFARE-based smart cards.

Webnovel Author Income Calculator

Link: mhk456.github.io/income-caculator-WN/

- **Live Product Impact:** Developed and deployed a niche financial tool that achieved 400+ views and maintained a consistent user base of 70+ active recurring users.
- **Complex Financial Modeling:** Engineered custom algorithms to calculate multi-tier revenue streams, including subscription splits, milestone bonuses, and global currency conversions.
- **Data-Driven Optimization:** Utilized Google Analytics to monitor user engagement and behavioral trends, iteratively refining the UI/UX based on real-world usage data.
